From Conquest To Conservation: Our Public Lands Legacy

Synopsis

From Conquest to Conservation is a visionary new work from three of the nation's most knowledgeable experts on public lands. As chief of the Forest Service, Mike Dombeck became a lightning rod for public debate over issues such as the management of old-growth forests and protecting roadless areas. Dombeck also directed the Bureau of Land Management from 1994 to 1997 and is the only person ever to have led the two largest land management agencies in the United States. Chris Wood and Jack Williams have similarly spent their careers working to steward public resources, and the authors bring unparalleled insight into the challenges facing public lands and how those challenges can be met. Here, they examine the history of public lands in the United States and consider the most pressing environmental and social problems facing public lands. Drawing heavily on fellow Forest Service employee Aldo Leopold's land ethic, they offer specific suggestions for new directions in policy and management that can help maintain and restore the health, diversity, and productivity of public land and water resources, both now and into the future. Also featured are lyrical and heartfelt essays from leading writers, thinkers, and scientists including Bruce Babbitt, Rick Bass, Patricia Nelson Limerick, and Gaylord Nelson about the importance of public lands and the threats to them, along with original drawings by William Millonig.

Customer Reviews

I am very disappointed with this book. The writing is fine. It is clear and accessible to a lay audience. Much of the material is important as well. All that said, the book is largely a failure because it is so

repetitive and poorly organized that there is no linearity to the narrative whatsoever. Which, if this was an edited collection, might be expected. But it's written and organized like a monograph. So, largely for that reason, I find the book fairly worthless. Simply put, there is just a ton of much better and better organized material on this same subject. Much of it also on Island Press, even (try Knight and Bates' New Century for Natural Resources Management, for example. It's an edited collection, it's 8 years older than this book, yet it is much more useful and barely any more out of date). But this one? Not so good.
